The project aimed at activating training that contributed to create a Vertical Italian Community of the artisan companies and of the SMEs operating in the textile sector.

The training activities wanted to improve the operators' skills and to give new market opportunities to the companies involved in the project. The project created a web portal where companies shared services, methodologies, experiences, solutions in order to give a response to common problems.

This project tried to create a network were firms can share their typical productive problems and exchange experiences and best practises.
