

In the last years TeDIS has deepened the topic of innovation in Public Administration, and in particular the role of Information and Communication Technologies in supporting strategies and activities covered by public institutions, agencies and single offices, both at national and at local level. The introduction and upgrade of technologies can also sustain the relation among different institutions and the dialogue and interaction with citizens, enterprises and associations.

This area comprehend the following topics:

- e-government
- e-democracy
- technologies and new communication models for Culture and Tourism

e-government research activities are focused on strategies, models and actions related to the introduction and widespreading of ICTs in order to improve the activities of public sector organizations, evolve processes, connecting different organizations and users. They take into account different channels and instruments available and how they can be organized, in a global strategy.

e-democracy research activities are focused on strategies and ways for building external interaction and facilitate citizens' participation to political and administrative issues.

TeDIS research activities have been deepened in the field of **Culture and Tourism**, in order to support Public Institution in the analysis and implementation of new models and innovative strategies of valorization and communication of cultural heritage and touristic resources based on ICT and new media.

Related Project

TeDIS has been partner of a large number of projects leaded by Local Institutions, whose aims are the research, experimentation and diffusion of a new use of ICT in the public sector.
