The eHub project is co-financed by the Regione Veneto (Regional Law on Productive districts) and Chamber of Commerce of Treviso and is coordinated by Treviso Tecnologia.

The project aims at developing an **innovative technological infrastructure tailored on the business needs of SMEs in the furniture industrial districts of Livenza and Quartier del Piave**.

Based on a research activity on the strengths and weaknesses in the competitiveness of firms specializing in the furniture industry (organized in industrial districts), the project intends to design and offer a technological platform to support information exchange and business coordination in the supply chain management at the local and international level. Moreover, the project aims at providing a new collaborative marketplace for SMEs, new ICT-based services as well as a distance learning platform.
