The 2014 Course for Sustainability took place at Venice International University, San Servolo Island, Venice, from September 28 to October 5 2014, and will featured two capacity-building components.

The first component was structured as a five days course (between September 29 and October 4) targeting the main challenges to sustainable development and resilience in the specific field of watersheds management. The selected participants included high-level officials from Ministries of the Environment and Municipal authorities from beneficiary Countries adjoining two important river basins in the Western Balkans: the Drin River Watershed (Albania, Kosovo and Macedonia) and the Drina River Watershed (Bosnia & Herzegovina, Montenegro and Serbia).

The second component, an innovative add-on lasting two days (September 29-30), was structured as a high-level roundtable discussion. Founders, members and partners of the CEO Platform for Green Growth in MENA joined the discussion on green growth challenges including water, energy resource efficiency and green public procurement and its potential applications, among other sustainability issues.
