

The 2017 edition of the European Summer School in Resource and Environmental Economics, organized by EAERE, FEEM and VIU, will be held at the VIU campus on the island of San Servolo from the 2nd to the 8th of July.

This year's theme will be *Macroeconomics, Growth, and the Environment*. □

Some of the most pressing environmental and resource problems – including climate change, deforestation, urban air pollution – are closely related to economic growth. Environmental policies have macroeconomic impacts. The aim of the Summer School is to provide tools and methods to study the intersection between macroeconomics, economic growth, and the environment.

The Summer School is aimed at PhD students who are writing a thesis on the dynamic macro-economics of environmental and resource problems or climate change and want to engage into a highly interactive exchange with experts in the field.

Applications are open until February 15, 2017.
